

Green Explorer

Unlock the Digital Revolution for Sustainable Development

Overview

Green Explorer is the gateway to a wealth of information about capital providers, mentors, capacity-building, events, facts, experts, knowledge, events and a growing selection of digitized information on the green economy.

Green Explorer is a digital platform to access green products and services, as detailed below, through an intelligent chatbot managed by sophisticated artificial intelligence engines which are able to store transactions on a blockchain.

The Green Explorer will use innovative distributed ledger technology to store and retrieve as needed every transaction that takes place on the platform.

This new paradigm of access to knowledge increases transparency and enables the automation of and assures the trustworthiness of auditing activities.

Green Finder

Leverages a database that collects, compiles, filters and disseminates data and information related to capital providers to more precisely pair developers with funding solutions, capacity building opportunities, events, academia platforms and other related information.

Green Deals

A marketplace that addresses B2C, B2B and B2G business needs through relevant modules, thereby assisting in creating precise matches between suppliers and consumers of green products and connecting various financial institutions for the purposes of enhancing funding.

News Aggregator

An online platform with a continuous, customizable flow of news and content emerging from State Members, Platform Members and related entities, organized from the sources of thousands of publishers and magazines on green economy and curated and compiled with the help of AI algorithms.
